

I am not opposed to low power FM. I do oppose the way in which the FCC decided to move forward, and I will be watching the results of the third party testing that this bill mandates to see if low power FM can, indeed, coexist with full power stations. The FCC appears to be bent on providing the service whether or not it causes interference or other problems for FM listeners. Our responsibility here in Congress is to those listeners, our constituents. I congratulate my colleagues in the House for passing legislation. I urge my colleagues in the Senate to do the same.

PROMOTING LIVABLE COMMUNITIES

The SPEAKER pro tempore. Under the Speaker's announced policy of January 19, 1999, the gentleman from Oregon (Mr. BLUMENAUER) is recognized during morning hour debates for 5 minutes.

Mr. BLUMENAUER. Mr. Speaker, all across America, people woke up this morning to front page stories in their communities about the Million Mom March against gun violence. There are pictures of the hundreds of thousands of people who gathered here on the Mall in Washington and other stories featuring the crowds in their hometowns in dozens and dozens of communities across America. I joined thousands of people for a march to Pioneer Square in Portland, Oregon yesterday. I do not know if there were a million moms or not.

Based on the reports that I have reviewed, it is likely that the hundreds of thousands here in Washington, D.C. and the tens of thousands in communities across the country could easily have reached or surpassed that number. The issue for me is not so much whether there were a million moms who marched, but the million moms who grieve.

In the last third of a century, over a million victims have been claimed by gun violence in the United States, more than the entire number of Americans lost in all the wars from the Civil War right through today. Yesterday's gathering was in memory of the million victims, though the testimony was not just of a million victims, but a million mothers, a million fathers, millions of brothers and sisters and grandparents whose lives were touched forever by gun violence.

The Americans who participated were not, in the main, advocates or activists. They were largely people who know that America can do better. They know that despite the opposition of the National Rifle Association to the Brady Bill, that America is safer because people with criminal records or a history of mental illness have been prevented by that Brady Bill from getting a half million guns.

They know that if these prohibitions were extended to people with a history

of committing violent misdemeanors, that America would be safer still because these people are 15 times more likely to commit violence with weapons. They know that if we care enough as a Nation to make it harder for a 2-year-old to open a bottle of aspirin, then we can make it harder for that 2-year-old to shoot her sister. They know that the gun show loophole should in fact be closed, especially when they learn that the delay of a few hours for a certain category of people who are not cleared instantly, that these people are 20 times more likely to have the record of mental health problems or criminal records that are precisely the people we want to keep weapons away from.

The American public knows that we can succeed. In the 1960s, Congress and the auto industry, prodded by the public, began a war on traffic deaths that resulted in safer cars and tougher laws. In the 1980s, a mother who lost her child to a drunk driver decided to add her voice to that of many others, and MADD, Mothers Against Drunk Driving, was born, and the government was encouraged, some would say forced, to crack down on drunk driving.

As a result of all of these options, in the last third of a century, we have cut the death rate on our highways in half. The mothers march is a signal to people all over America that it is time for a similar effort to reduce gun violence in our communities.

Everybody knows that there is no single solution, but that there are many small steps that will save lives. If we in Congress are serious about listening to our constituents and making our communities more livable and safer, we have to start today. Why does the Speaker not direct the conference committee on juvenile crime, which has not met since last August, to meet now and address the simple, common-sense provisions to reduce gun violence that have already passed the Senate?

Action by this House would be an important sign that we can send to our constituents that we understand their concerns and we share their passion for saving families from unnecessary violence, making our communities more livable, our families safer, healthier and more economically secure.

TECHNOLOGY, THE NEW ECONOMY AND DIGITAL OPPORTUNITY FOR ALL AMERICANS

The SPEAKER pro tempore. Under the Speaker's announced policy of January 19, 1999, the gentleman from Illinois (Mr. WELLER) is recognized during morning hour debates for 5 minutes.

Mr. WELLER. Mr. Speaker, I appreciate very much this opportunity today to talk about technology, the new economy and digital opportunity for all Americans, but let me begin by just sharing some statistics.

Over 100 million U.S. adults today are using the Internet, and seven new people are on the Internet every second. 78 percent of Internet users almost always vote in national, State and local elections, compared to 64 percent of nonInternet users. It took just 5 years for the Internet to reach 50 million users, much faster than traditional electronic media. In fact, it took 13 years for television to reach 50 million and radio, 38 years.

The Internet economy generated, just in the past couple of years, over \$300 billion in revenue in 1998. It was responsible for creating 1.2 million jobs. Preliminary employment data now shows that the U.S. high technology industry employed 4.8 million workers in 1998, making it one of our Nation's largest industries, in fact, larger than steel, auto and petroleum combined. In 1997, the high tech average wage was 77 percent higher than the average U.S. private sector wage.

I am proud to say I represent the great State of Illinois, what some call the land of Lincoln. People often do not think of Illinois as a technology center, but it is. In fact, Illinois ranks third today in technology exports and fourth in technology employment. But clearly, Illinois is one of the top 10 cyber States, as some would say, a major State that is producing new technology and new ideas.

I have talked with many over the years, over the last few years, in particular, about what it takes and why this economy is growing so well in Illinois. And, that is, they say that government has actually stayed out of the way of the new economy. The new economy has been tax free, it has been regulation free, it is trade barrier free. That is why it has been so successful, creating opportunity for so many. That is why I am pleased that House Republicans continue to lead the way in technology. Our e-contract continues to work for a tax-free, regulation-free, trade-barrier-free new economy. And, of course, one of the areas we want to focus on is the area of providing digital opportunity for all Americans.

□ 1245

You know, it is unfortunate that it seems the higher the income, the more likely you are on-line. Families that have incomes of \$75,000 or more are nine times more likely to have a home computer, and more than 20 times more likely to have Internet access than a low or moderate income family.

When asked why lower income families and more moderate income families do not have Internet access or a home computer, those families, those working families, cite that cost, the cost of the computer, the cost of subscribing to the Internet access, is a chief barrier.

That is why I am so pleased that this week House Republicans once again are
